PROFESSIONAL SUMMARY

Junior–mid level **.NET / .NET Full Stack Developer** with solid experience building real-world web and desktop applications using **C#, ASP.NET Core, MVC, Web API, Entity Framework, and SQL Server**. Strong background in implementing **RESTful APIs**, working with relational databases, and creating clean, maintainable code following **OOP and SOLID principles**. Comfortable working with modern frontend tools such as **React, HTML, CSS, and JavaScript**. Proven ability to deliver solutions in **Agile/Scrum** teams and explain complex technical concepts clearly to others.

TECHNICAL SKILLS

- **Backend & .NET:** C#, .NET, .NET Core, ASP.NET MVC, ASP.NET Web API, Entity Framework / EF Core, Dapper, LINQ
- **Frontend & Web:** HTML, CSS, JavaScript, TypeScript, React.js, Razor Views, RESTful services
- **Desktop:** WinForms, WPF
- **Databases:** SQL Server, MySQL, PostgreSQL (designing schemas, writing queries, joins, and stored procedures)
- **Tools & DevOps:** Git, GitHub, Visual Studio, VS Code, Postman, Swagger, basic Azure DevOps / CI/CD, Docker (fundamentals)
- **Practices:** OOP, SOLID principles, MVC architecture, layered architecture, Agile/Scrum, basic unit testing with xUnit & NUnit

PROFESSIONAL EXPERIENCE

.NET Associate Developer | Zentrium Business Solutions | Jan 2025 – Present

- Contribute to a **Library Management System** using ASP.NET MVC and Web API, focusing on clean, testable code.
- Implement RESTful endpoints for book catalog, member management, and transactions, following proper HTTP verbs and status codes.
- Use **Entity Framework Core** and **SQL Server** for data access, including migrations, relationships, and LINQ queries.
- Collaborate with developers using Git/GitHub, perform pull requests, and participate in code reviews to maintain quality.
- Work within an **Agile/Scrum** environment: attend daily stand-ups, sprint planning, and sprint reviews.

.NET Developer | Ugrace Technologies | Feb 2023 – Jan 2025

- Developed and maintained production applications using **C#, WinForms, and ASP.NET MVC**.
- Built a **Student Clearance System** that reduced manual clearance processing by automating workflows and status tracking.
- Developed a **Poultry Farm Management System** to manage inventory, feed usage, expenses, and sales with dashboard-style reports.
- Designed and consumed RESTful APIs to connect frontend interfaces with backend services.
- Integrated **SQL Server** databases and used Entity Framework for CRUD operations, queries, and validations.

C# Programming Tutor | Ugrace Technologies | Aug 2022 – Dec 2023

- Taught **C# programming** from basics to intermediate topics, including OOP, collections, and exception handling.
- Guided students through building console apps, simple desktop apps, and introductory ASP.NET projects.
- Created structured lesson materials, exercises, and mini-projects, simplifying complex ideas for beginners.
- Helped students debug code, understand error messages, and adopt good coding practices.

PROJECT HIGHLIGHTS

The projects listed below are **my personal projects**, independently built to showcase my abilities in designing, developing applications using technologies such as ASP.NET, C#, Entity Framework, SQL Server, and modern frontend tools.

Ecommerce Website

An e-commerce website I built with **HTML, CSS, and JavaScript** uses HTML for page structure, CSS for styling and layout, and JavaScript for interactive features like adding items to a cart and updating content dynamically. These three technologies work together to create a simple, responsive, and user-friendly online shopping experience.

Library Management System API | C#, Entity Framework Core, SQL Server

A Library Management System API I built with **ASP.NET Web API** provides a backend service that manages books, users, borrowing records, and returns. It exposes RESTful endpoints that allow clients to perform operations such as adding books, searching, issuing, and tracking availability. ASP.NET Web API ensures secure, scalable, and efficient communication between the frontend and the database, making it easy to integrate with web or mobile applications.

PRODUCT CATALOGUE API | ASP.NET Web API, EF Core, SQL Server

I built a Product Catalogue API that provides structured endpoints for managing product data such as names, prices, categories, and stock levels. It allows applications to retrieve, filter, and update product information efficiently. This API is commonly used in e-commerce systems to keep product listings organized and accessible across web or mobile platforms.

EDUCATION

Higher National Diploma (HND), Software and Web Development
Harvarde College, Abeokuta, Ogun State, Nigeria | Graduated: 2025

CERTIFICATIONS

Scrum / Agile Certification – trained in iterative development, sprint planning, and team collaboration.

Scrum Study Online Course: - October, 2025. [Check certificate here...](#)

Jobberman Certification – trained on soft skills and endline assessment.
